

Jungheinrich assistance systems **addedVIEW**

JUNGHEINRICH

Maximum precision **with Jungheinrich addedVIEW.**

Digital camera systems for a wide range of applications.

Increase safety and efficiency in your warehouse with the versatile and modular Jungheinrich addedVIEW assistance systems. Whether stacking and removing at high lift heights, working in unclear indoor and outdoor areas or handling sensitive goods – addedVIEW offers the appropriate digital camera system for a wide range of requirements in everyday warehouse operations.

In addition to impressive image quality and additional digital features, the assistance systems impress with their high compatibility. Parallel operation with the Jungheinrich zoneCONTROL assistance system on a truck display guarantees an optimum overview during operation.

When used with common warehouse management systems, bar codes can be scanned quickly and reliably and errors during order picking can be avoided.

All benefits at a glance

- Convincing digital image quality.
- Digital horizontal laser with positioning aid for working at great heights.
- Compatible for bar code scanning with standard WMS.
- Precise and safe manoeuvring thanks to 360° all-round visibility.
- Optional parallel operation with the zoneCONTROL assistance system.

Jungheinrich addedVIEW for maximum benefit.

Efficiency

Maximum performance with the most efficient tools.

Save yourself unnecessary handling, long search times and annoying mistakes in the daily warehouse process. Ensure maximum efficiency for stacking and removal with the flexible camera solutions from Jungheinrich addedVIEW.

Modular camera systems

- Fork camera with scan function: in combination with common warehouse management systems (WMS), time can be saved by scanning bar codes on storage compartments directly via the camera and acknowledging them via a button on the steering wheel.
- Fork camera with scan function when using the Jungheinrich WMS: desired bar codes are automatically recognised and marked as the truck passes, enabling precise work at high speed.
- Code combinations such as goods and storage compartment codes can be checked simultaneously, eliminating the possibility of incorrect storage.

Cost and time savings

- All addedVIEW camera systems allow the cost-effective parallel operation of the Jungheinrich zoneCONTROL assistance system on the assistance display.

Safety

Best conditions for working safely.

Protection for people, machinery and warehouse: the impressive all-round visibility of the addedVIEW 360° camera system enables fast and accident-free navigation even in tight, unclear situations.

HD image quality

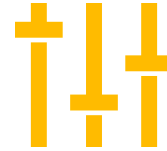

- High image resolution and contrasts for a detailed, precise image.
- Dynamic adjustment of exposure parameters in difficult lighting situations and when transitioning from outdoors to indoors.

Camera systems for maximum safety

- Fork camera: clear view of goods and rack even with the pallet picked up or in poor light.
- 360° camera system: speed-dependent autozoom for viewing objects when manoeuvring and automatic camera switching to display the relevant warehouse area depending on the direction of travel and speed.

Parallel operation of several assistance systems

- Additional increase in safety through the combined use of addedVIEW and zoneCONTROL on the assistance display.

Individuality

An assistance system as individual as your business.

Whether virtual horizontal laser with positioning aid for working at great heights, easier scanning or confident manoeuvring – Jungheinrich addedVIEW offers the right camera solution for every work requirement.

Wide range of fork camera models

- Fork camera with best HD image quality for light tasks with the reach truck.
- Fork camera with virtual horizontal laser and positioning aid for safe working at high lift heights.
- Fork camera with scan function, WMS connection and acknowledge button near the steering wheel for smooth scanning of bar codes and optimised process sequences.

360° camera system

- Digital all-round visibility system with speed-dependent autozoom.
- Recommended equipment for counterbalance forklift trucks with increased demand for overview.
