

KiSoft Delivery Solution

A high-availability cloud solution designed for rapid, scalable implementation offering unmatched flexibility in your ongoing operations

Smart Forecasting: anticipating fleet needs and order trends

End-to End Delivery Management: from pre-planning to real-time Monitoring

Instant acces to critical transport data via intuative dashboards

Main functional pillars

Robust planning and optimization you can rely on

- Intelligent territory, order and fleet forecasting
- Planning options for single-day, weekly, multi-day,...
- Versatile optimization strategies tailored to your (business) needs
- Incorporates real-time traffic conditions and vehicle-specific routing
- Managing unexpected route changes
- Scales smoothly to handle operations of any size

Actionable insights that drive profitability (ML)

- Live analytics dashboards for instant visibility
- In-depth historical analysis for data-driven decisions
- Accurate cost tracking and financial insights
- AI-powered intelligence through machine learning

Solutions

All-in mobile app

- One app for all processes over the last mile (from pick-up to handover)
- In-app navigation
- Barcode scan with in-build camera
- Supervisor approval via the app

Visible Delivery

- Transparency at all stages of delivery
- Real-time tracking of the delivery
- Reporting of incidents at the time of occurrence
- Short-term changes in the delivery schedule can be handled

Easy to use

- Process controlled workflow guidance
- Focus on user experience (UX)
- Quick and easy onboarding of users
- Available for Android and iOS

Driver App Features

Native mobile application

Supported Android and iOS

Optimized Barcode Scanning

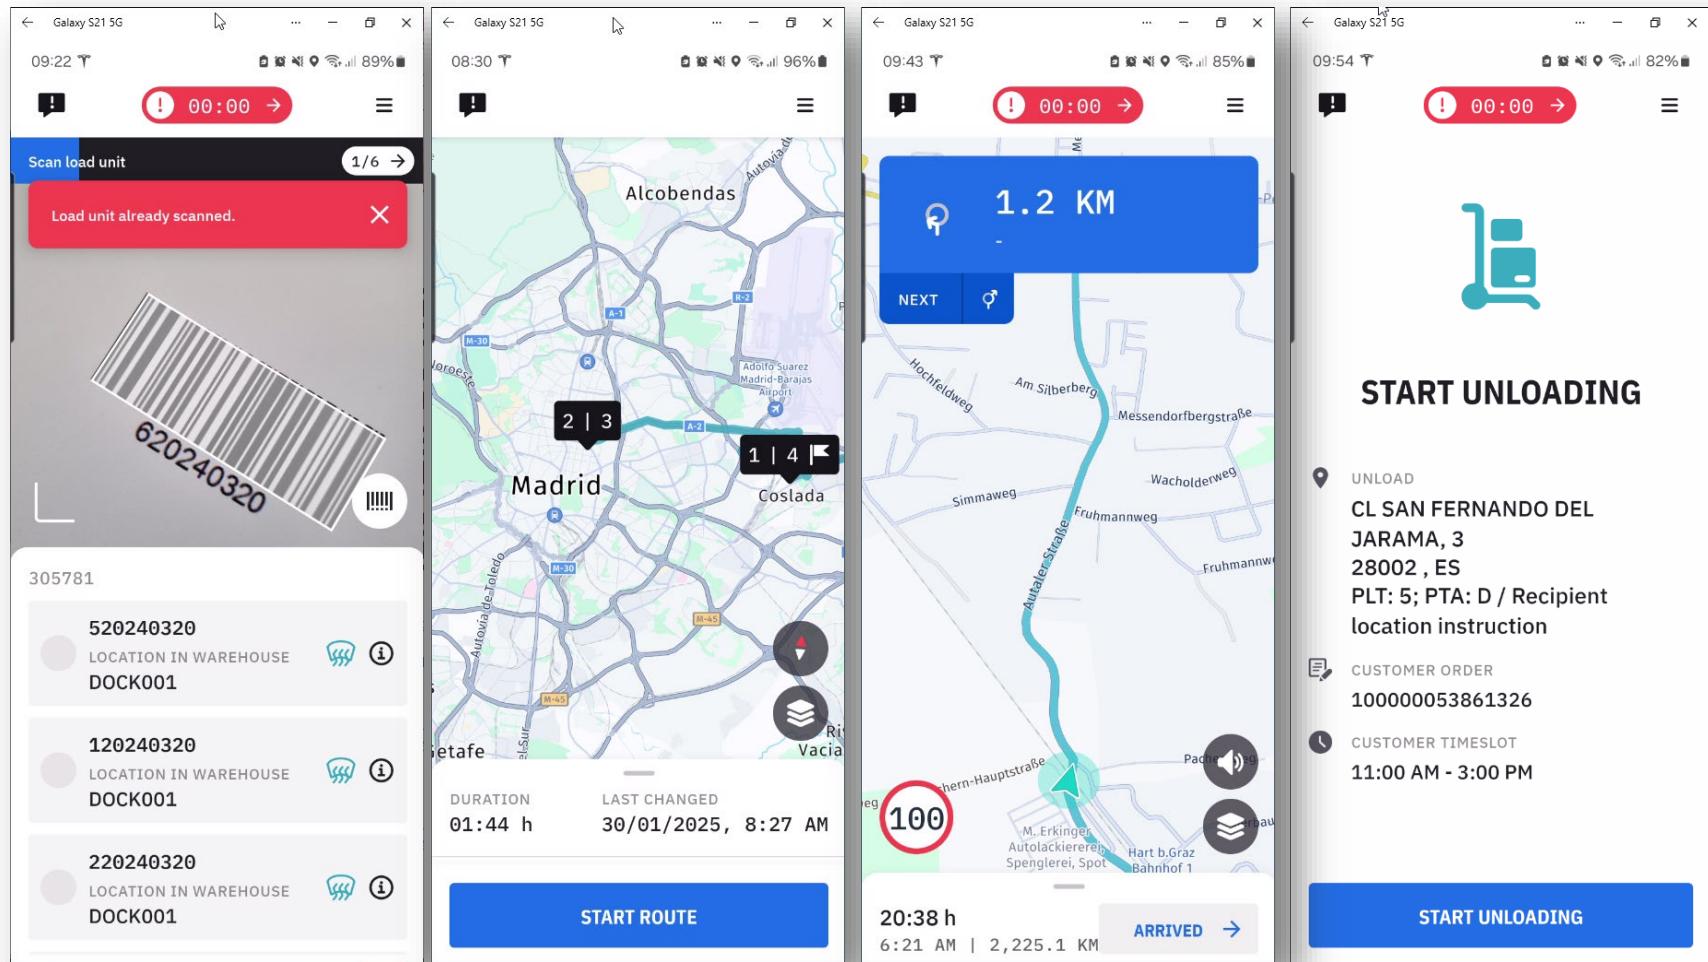

with the built-in cell phone camera

Loading and unloading

Simple workflow for un/loading in the optimal sequence
