

STILL

STILL iGo automation solutions.
Automated for all situations.

first in intralogistics

Top quality, high performance products combined with fast and reliable service means that STILL is a dependable and competent partner for intralogistics – and has been for more than 90 years now. Today, more than 7000 employees globally work to develop and implement innovative concepts and unique intra-company logistics solutions. STILL's latest innovations ensure that the company's prized features of cost-effectiveness and environmental responsibility, functionality and design are no longer confined to its electric forklift truck.

Our responsibility by no means ends with the delivery of the forklift truck – STILL is by your side as a strong partner throughout the entire period of use. A close-knit service network with more than 2000 highly-qualified STILL service technicians across Europe guarantees unlimited availability of your intra-company logistics. You can contact us on our service hotline 24 hours a day, 365 days a year.

STILL – always one step ahead.

STILL – always one step ahead. Since 1920.

The STILL PartnerPlan®. We'll show you the way.

Deploy the STILL PartnerPlan® to navigate through the world of STILL products. Whether you are in search of a solution for a small warehouse or a global storage system: The clearly structured STILL PartnerPlan® will offer you maximum flexibility to select the product and benefit from STILL products you need for your logistics application. Be it trucks for transport, rack systems or intelligent automating solutions.

Be it technical or financial services.

Be it holistic warehouse concepts or management systems for complex flows of material and large fleets. Discover the multitude of possibilities to individually combine the successful STILL products with one another. Arrange your personal success package. Also, you will profit from the perfect harmony of the STILL products. When combined, each product provides best possible efficiency. Plan your success. We'll show you the way.

The STILL PartnerPlan®. We show you the way.

SERVICE	Safety	Maintenance	Repair	Full Service	Training	STILLReport
FINANCING	Short term rental	Long term rental	Leasing	Basic-Dynamic®	Hire-purchase	Purchase

STILL iGo automation solutions. Automated for all situations.

STILL iGo – tailor-made automation solutions from STILL. In a time when there is increasing focus on the partial and full automation of various warehouse processes, STILL offers its customers individual solutions and expansion stages for any needs depending on requirements and the area of use. The STILL iGo product portfolio offers companies the opportunity to handle increasing volumes of goods and at the same time save storage space and costs. STILL is one of the most sought-after specialists in the world when it comes to automated warehouse solutions. This success is due to the fact that STILL uses automation from its own series produced trucks. This means that the customer gets both tried-and-tested premium quality and maximum flexibility, because all forklift trucks can also be operated manually at any time.

Benefit from STILL iGo and make your internal logistics processes more efficient than ever.

iGoSystems – complex automation solutions.

iGoEasy – automated individual trucks with iPad application.

iGoRemote – semi-automatic trucks with remote control.

iGo Remote

iGoSystems – complex automation solutions.

Different storage situations require individual solutions. STILL offers you a perfectly adjusted combination of series produced trucks and corresponding technology, including the installation of all components. For analysis, planning and implementation, rely on needs-based automation and ultimate efficiency through the selection of optimally adjusted technologies. Various types of navigation, such as magnet point or laser navigation, allow the trucks to move independently through the warehouse. And while personal safety scanners guarantee the greatest possible safety in any direction of travel, the individual selection of the appropriate sensor ensures easy pallet recognition!

The truck master computer – the heart of our automation solutions.

The master computer optimally distributes the orders from your ERP or warehouse management system to the automated forklift trucks. This means that you can always rely on the fact that your fleet is used in the best way possible. Traffic regulation on pre-programmed traffic courses, visualisation of truck movement and monitoring of the battery charge status are also carried out by the master computer.

The automation of your repeat transport tasks could result in huge potential savings. Efficient work processes and the transparent flow of material and information reduce the error rate and considerably improve transport quality. With

STILL, you always stay flexible because all automated series produced trucks can also be operated manually in the worst-case scenario.

Automation is suitable for almost all sectors – no matter whether it is food, beverages or the automotive industry. STILL offers the right solution for every requirement and working environment.

+ Wide-aisled warehouses: Automated FM-X reach trucks do lots of work here. From horizontal transport to the operation of one-way shelving through to the stocking of fully-automated shuttle systems.

+ High-shelving warehouses: The strengths of automated MX-X and MX-Q order pickers really come out in narrow aisles. Both at ground level and at the top of the shelves.

+ Horizontal transport: Whether it is in production supply or as an alternative in the pre-storage area – automated EGV-S do their best work here.

+ Transport of goods: Automated tigger trains guarantee optimum material supply on freely definable routes. You can rely on STILL. When the tailor-made automation solution has been implemented, a professional service concept will guarantee that your system is always available.

iGoEasy – automated individual trucks.

With iGoEasy, STILL gives you a cost-effective introduction to the world of automation. The innovative combination of iPad and driver-free movement and pallet stacker EGV-S provides the advantages of automation solutions even in areas where goods transport was previously only sensible with a manually driven forklift truck. In combination with a truck computer, navigation technology and personal safety scanners, an intelligent solution is created for all systems with low transport volumes and standardised orders. It is typically used for horizontal transport with a storage height of up to 800 mm. This means that the supply and disposal logistics in your production process can become even more efficient.

The best thing: using a manual on the iPad, which is easy to understand, you are able to install the system independently or to adjust it at a later date. In order to commission the system, initially reflectors are placed along the intended route and scanned in. Then the route and the loading and release points are defined using the iPad. Once the completed installation has been confirmed using the iPad, everything is ready to go: Driving instructions are sent directly to the working stations on the truck via WLAN simply by clicking the corresponding button on the mobile end device, and then they are automatically carried out.

The cockpit function – Keep everything at a glance.

Thanks to the included iPad app, you will always have an overview of everything, not just the routes! The cockpit function provides you with all the forklift truck information that you require at any time: truck speed, loading status, battery status and driving instructions are always available to be viewed. Due to the vehicle cameras installed on the front and rear, it is also possible to stream a live picture to the iPad display. Obviously it is also possible to change existing driving instructions during on-going operation.

iGoEasy combines comparatively low device, servicing, installation and repair costs with all the benefits of automated series devices. From gentle goods transport, to minimising the risk of accidents and damage, through to reduced wear. STILL therefore sets a new standard for an introduction to extremely cost-effective and intuitively operated automation solutions.

iGoRemote – semi-automatic trucks with remote control.

STILL has developed the iGoRemote system in order to make order picking as easy as possible for you. STILL offers you a simple way to arrange your employees' logistics work so that there is optimum protection for their performance and physical health. Even in the forklift truck design, STILL aims to ensure the best possible body position for your employees. You can take even more physical strain off your employees thanks to iGoRemote and even increase productivity !

With the aid of an intuitive and convenient remote control, the

horizontal order picker or tow tractor can be oriented to the left or right of the shelf and then easily operated remotely. The truck continues moving for as long as the switch is pressed on the remote control. You also only need to push a button to change the side of the aisle. When the remote control is not needed, simply place it in the practical belt holster or a light arm pocket.

Conveniently moving the forklift truck to the correct place and positioning it just right there without getting in – the

iGoRemote! This technology not only means that there is no need to get in and out or walk around, it also saves a lot of time. As safety is the most important thing for STILL, the iGoRemote also has a personal safety scanner in the direction of travel. The forklift truck stops automatically if there is an obstacle in the way. When combined with the relevant software, the order picker also automatically moves around objects sticking out from the shelf and independently positions itself at the optimum distance from the shelf for

order picking. Obviously, as with all automation solutions from STILL, the forklift truck can also be manually operated at any time. The advantages of the iGoRemote are therefore obvious: time saving, making work easier and avoiding damage will result in a considerable increase in productivity for your order picking processes. And this is not all, because the iGoRemote is also a great help for production supply and disposal amongst other things.
