

„We are glad to have collaborated with Key Concept as part of driving further operation enhancements. Their expertise was instrumental in improving our Goods-to-Person (GTP) area. By integrating WMS and optimizing the sequence of plan box pickups, they significantly improved our operational efficiency. The real-life impact was evident during both throughput tests and daily production. We achieved a 7% increase in peak hour throughput and a 25% reduction in shift duration until 99% of order lines were picked. These outstanding results were confirmed using emulation. Key Concept has truly enhanced our supply chain performance.“
